XII INTERNATIONAL RANGELAND CONGRESS ORGANISING COMMITTEE MEMBERS

Congress Co-Chairs | Treasurer

Dr. Donald Burnside, DG Burnside and Associates, Perth, Western Australia, Australia
Dr. Cathleen Waters, GreenCollar, NSW, Australia

Scientific Program Committee Chairs

Dr. Alex Baumber, University of Technology, Sydney, New South Wales, Australia
Dr. Cecile Godde, The Commonwealth Scientific and Industrial Research Organisation (CSIRO),
Australia

Publication Committee Chair

Dr. Sarah McDonald, New South Wales Department of Primary Industries and Regional
Development, Australia

Sponsorship Committee Chair

Dr. Andrew Ash, AJ Ash and Associates, Queensland, Australia

Tour Committee Chair

Dr. John Gavin, Remarkable NRM, Queensland, Australia

Logistics Committee Chair

Dr. Pieter Conradie, Department of Agriculture and Fisheries, Queensland, Australia

Delegate & Developing Country Support, International Liaison & Publicity Committee Chairs

Dr. David Phelps, Tropical North Queensland Drought Resilience Adoption and Innovation Hub,
Australia
Dr. Nicole Spiegel, Department of Agriculture and Fisheries, Queensland, Australia

Indigenous Oversight Chair

Dr. Stephen van Leeuwen, Curtin University, Western Australia, Australia

Promotion, Publicity & Social Media Chair

Alison Nicholson, Department of Primary Industries and Regions South Australia, Australia

Other Committee Members

Dr Dana Kelly, University of Queensland, Queensland, Australia
Dr Saravan Peacock, Department for Environment and Water, South Australia, Australia
Patti Sbrissa, All Occasions Group, South Australia, Australia
Sophie Stefanoff, All Occasions Group, South Australia, Australia
Chelsea O'Brien, All Occasions Group, South Australia, Australia

The assistance of many colleagues not listed here is gratefully acknowledged.

REVIEWERS

All papers underwent peer review by at least one reviewer and were edited prior to publication. We acknowledge the contribution of the following people for their assistance in reviewing full papers submitted to the congress.

Brianne Altmann	Abule Gedda Ebro	David Phelps
Karl Andersson	Niilo Gobius	Wayne Pitchford
Andrew Ash	Ganzorig Gonchigsumlaa	Jeremy Pittman
Mohamed Habibou	Iain Gordon	Tony Pressland
Assouma	F. Patrick Graz	Hugh Pringle
David Augustine	Daryl Green	Kate Reardon-Smith
Warwick Badgery	Juan Guerschman	Gordon Refshauge
Manjunatha B.L.	Ron Hacker	Nick Reid
Derek Bailey	Rachel Hay	Matthew Rigge
Jason Barnetson	Jacob Hennig	Jodie Reseigh
Gary Bastin	Madonna Hoffmann	Caroline Ruto
Alex Baumber	Alexander Holm	Manam Saaed
Theresa Becchetti	Bernard Hubert	Nicole Sallur
Paul Beck	Lachlan Ingram	Igshaan Samuels
Brandon Bestelmeyer	Ali Jahani	Merilynn Schantz
Terry Beutel	Sadeeka Jayasinghe	Zhanhuan Shang
Teshome Beza	Peter Johnston	Abolfazl Sharifian
Nagaratna Biradar	Srijana Joshi	Bahraman
Mélanie Blanchard	Juergen Knauer	Mark Silburn
Vincent Blanfort	Apostolos Kyriazopoulos	Jennifer Silcock
Oscar Blumetto	Gabrielle Lebbink	Richard Silcock
Janis Boettinger	John Leys	Aaron Simmons
Steven Bray	Ping Li	Awnindra Singh
Fiona Brayshaw	Nan Liu	Ashley Sparrow
Joel Brown	Mounir Louhaichi	Nicole Spiegel

Maria Fernandez-Gimenez	Peter O'Reagain	Ben Wu
Andiswa Finca	Susan Orgill	Jing Wu
Tamara Freitas-kirk	David Orr	Baisen Zhang
Margaret Friedel	Carolyn Palmer	
John Gavin	Beth Penrose	

PREFACE

Rangelands cover over 56 percent of the world's land mass, and support directly about 500 million people. In Australia, they cover about 80 per cent of the land mass, and are important contributors to the nation's wealth, culture, natural resources and identity. It is fitting that the XII International Rangeland Congress was held in Adelaide, South Australia in June 2025, being the third IRC held in Australia, with preceding Congresses held in the USA (twice), France, India, South Africa, China, Argentina, Canada and Kenya.

Given the impact of Covid in preventing people from meeting in person in Nairobi, Kenya for the XI IRC, this Congress was the first opportunity for the international rangeland community to meet face-to-face since the X IRC, held in Saskatoon, Canada. The Organising Committee were delighted to welcome 772 delegates from 46 countries to Adelaide, who generated a robust international flavour in the presentations, discussions, tours and resolutions passed by the delegates.

Over the Congress, 292 papers were presented as keynote, full and lightning presentations. A further 192 posters were available for delegates to view. The papers are grouped into the seven sub-themes for the Congress: (1) Valuing rangelands and pastoral systems for their societal contribution; (2) Co-design, partnerships, and incorporating traditional knowledge for more enduring rangeland outcomes; (3) Technology, information systems, communication, and big data to aid monitoring and decision making; (4) Integrating rangeland ecology into management; (5) Managing risk – climate and other system shocks and trends; (6) Livestock production systems in a world of changing drivers; and (7) Multi-functional land use in rangelands – moving beyond niche opportunities.

These sub-themes and the collection of papers reflect the increasing inter-connectedness between what is happening in the rangelands and what is happening in the rest of the world's economies, social systems and governance. They also recognise the need to integrate trends in technology, artificial intelligence and communication into the day-to-day lives of rangeland decision makers and residents. Finally for too long the traditional indigenous knowledge of long-established rangeland cultures is receiving its rightful attention and recognition.

As well as the formal sessions of the Congress, pre-congress workshops dealing with traditional Indigenous knowledge, global rangeland standards in certification and monitoring, and the role of pastoral multifunctionality in contributing to growing societal challenges attracted approximately 150 participants. Over 200 delegates enjoyed celebrating 50 years of the Australian Rangeland Society. Over 60 delegates participated in pre-Congress Tours arriving in Adelaide from Perth, Alice Springs, Longreach and Sydney. Six mid-Congress tours learned about Indigenous culture, water management in the Murray-Darling Basin, research and development in dryland farming, the rangelands to the east of Adelaide, the scenic attractions in the Adelaide Hills, and the world-renowned wineries in the McLaren Vale.

The Chairs of the Organising Committee for the XII International Rangeland Congress from 2021 to 2025 acknowledge the tremendous contributions of Dr Sarah McDonald (Chair, Publications Sub-Committee) and her team of people who reviewed papers; and Dr Alex Baumber (Chair, Program Sub-Committee) and his team who sorted Abstracts and arranged the Program for the Congress. We offer our grateful thanks. We thank also Pieter Conradie, Chair, Australian Organising Committee, 2021-2022; Dr Nicole Spiegel and Dr Andrew Ash, Co-Chairs, Australian Organising Committee, 2022-2024 for their contributions over the last five years. We are also very grateful for the excellent support and advice provided by Ann-Marie Quinn and her team at All Occasions Group, especially Patti Sbrissa, Sophie Stefanoff and Chelsea O'Brien.

We commend the contents of these proceedings to all those interested in and committed to progressing the science and art of rangeland management across the many domains in the world. We look forward to continuing this important work at the XIII International Rangeland Congress in Ulan Baator, Mongolia in August 2029.

Dr Donald Burnside and Dr Cathleen Waters, Co-Chairs, XII international Rangeland Congress.

TABLE OF CONTENTS

XII INTERNATIONAL RANGELAND CONGRESS ORGANISING COMMITTEE MEMBERS	II
IRC SPONSORS AND SUPPORTERS	III
REVIEWERS	IV
PREFACE	V
TABLE OF CONTENTS.....	VI
PLENARY PAPERS.....	1
Stewards of the steppe: Khoid Mogoin Gol-Teel pastoral community institutions and their role in rangeland ecosystem conservation.....	2
Ulambayar, T; Nergui, M; Batkhuyag, B; Davaasuren, O	
Traversing transdisciplinary terrain: a journey from knowledge integration to decolonial awareness	7
Fernández-Giménez, ME; Bubar, R; Souza, C	
Big data and digital tools to support adaptive rangeland management.....	19
Webb, N; McCord, S; Bestelmeyer, B; Herrick, J; Edwards, B; Houdeshell, CA; Kachergis, E	
Mind the gap: Integrating rangeland ecology into management requires more than just knowledge dissemination	24
Vetter, S	
Rangeland conservation: courage and resiliency in the face of climate adversity	29
Molesworth, A	
THEME 1. VALUING RANGELANDS AND PASTORAL SYSTEMS FOR THEIR SOCIETAL CONTRIBUTION	34
Cultivating knowledge among pastoralists’ children, students, rangeland professional, and broader society	34
Modifying the education system for children of migratory pastoralists of Jammu and Kashmir State of India for equitable growth	35
Neetika, S	
Prairie Project on Zooniverse: citizen science and inquiry-based learning for promoting rangeland literacy	39
Wied, JP; Jaime, X; Gao, W; Wu, XB; Angerer, JP.	
Bridging academia and outreach: mentorship programs for future rangeland scientists	43
Ehlert, KA; Brennan, JR; Menendez, H; Johnson, P	
Going beyond the choir: an arts-based approach to informing the public about rangelands, grasslands and grasslands peoples in the International Year of Rangelands and Pastoralists 2026	49

Bramwell, S; Svejcar, L; Doan Crider, D; Ironman, C; Koundinya, V; Hudson, T; Peña, K; Bechetti, T; Roberson, A; Snow, W; Rattling Hawk, M.	
Education and experience to empower the next generation of rangeland professionals.....	53
Launchbaugh, KL; Hickman KR; Johnson, PJ; Edinger-Marshall, SB	
Utah range camp: helping youth value rangelands	58
Farnsworth, C; Greenalgh, L; Longmore, A; Esplin, B	
Drylands Summer School: a pathway from training to a community of professionals	62
Valenzi, V; Herrera, PM; Hofer, T; Rezende, M; Gerbaldo, L	
Color country natural resource camp – teaching high school students about natural resource career opportunities	67
Scow, B ; Cox, S ; Frey, N ; Parent, V	
Informed policy & governance + women empowerment and leadership in rangelands.....	71
Policy engagement to enhance future American rangeland systems:	72
implications for the IYRP 2026.....	72
Coppock, DL	
Adapting decent work (SDG 8) for sustainable pastoral systems: meanings and challenges of decent work for Mongolian herder women.....	77
Bayarbat, T; Fernández-Giménez, M; Ulambayar, T; Jamsranjav, C	
Developing a community-based rangeland health system in Ethiopia	81
Abule, G; Sircely, J; Eba, B; Mor, S; Belay, K; Admasu, B; Fascendini, M; Said, M; Guyo, G; Abdi, H; and Flintan, F	
Understanding conservation of Orans in India through the lens of institutional bricolage..	85
Majumdar, S; Nandigama, S.	
Exploring how gender intersects resilience in the face of chronic uncertainty in the drylands	89
Ash, R; Wario, H; Wachira, J; Hassan, R; Guracha, D	
Unleashing multifunctionality: How policy support and good governance are key to sustainable land management.....	96
Haddad, F; Chnais, E.	
Bridging gender gaps in rangeland resource and conflict mapping: the role of participatory GIS, a case study in Kenya.....	100
Paliwal, A; Korir, V.K ; Kenduiywo, B, Galie, A, , Bullock, R; Pacillo, G; Wane, A; and Whitbread, A	
Pastoralists training and peer-learning	104
Empowering pastoral landowners through soil understanding and land management strategy	105
Tschirner, A.; Eyres, M. ; Scott, E.; Leyden, J.	
Northern Australian Indigenous producer group progress, learnings and contributions....	110
Perkins, ID; Pascoe, F. ² ; Gorringer, M ³	
The Northern Territory Rangeland Management Course: growing the next generation of land managers.....	115
Holzapfel, S; Williams, M; Eastaughffe, J; Pettit, C; Kain, A	
Developing next generation beef leaders to impact and influence within the rangelands .	120
Corbett, ER; Hopkins, K	
Grazing Fundamentals EDGE: partnerships, collaboration and co-design in practice	125
Plumbe, M; Bawden, H; Tschirner, A.	
Transformation of tacit knowledge into recommendations for ranchers through rural extension in Uruguay.....	130

Pereira Machín, M; Areosa, P; Carriquiry, E; De Hegedus, P; Leivas, R; De Brum, F	
Carbon in the rangelands: Developing a training package for pastoralists	135
Bawden, HT; Connors, H	
A life in the Central Australian pastoral industry starts here – creating future land managers through Rangeland Management Courses.....	140
Kain, AJ; Anderson, GA	
Land tenure, land rights, land-uses, conflicts & governance	145
Joint village land use planning across administrative boundaries protects shared grazing lands and water points in Tanzania. Lessons learned from fifteen years of development and policy influencing.....	146
Flintan, F; Kalenzi, D; Akilimali, A; Ngurumwa, P; Faustin, Z; Andalu, WA; Olesikilal, B; Mkalawa, C	
Toward a new methodology for conceptualizing mobile pastoralists’ and pastoralist women’s tenure and mobility rights	150
Kroeker-Maus, D; Davila Pereira, I.	
Documentary film - stories of American rangelands: meeting the challenges of a changing climate & culture	155
Hutchinson, B; Audoin, F	
ESRM Planning, delivering NRM action and direction through collaboration	160
Marver, RA; Hyatt, JC	
Poster presentations – Theme 1	164
Trend of <i>Stylosanthes hamata</i> seed production in India	165
Biradar, N; Reddy, R, Kumar, V; Tirapur, L; Channal, G	
Impacts of grazing pressure and rangeland ecological potential on the degraded rangeland recovery of dry steppe	169
Dashbal, B; Densambu, B	
Advocacy instrument to voice pastoralism: experiences and lessons learned from Ethiopia	172
Getahun, T; Hussien, AA; Tolossa, D; Desta, SD	
Increasing education and awareness on grassland ecosystems through the development of curriculum	175
Gordon, KL; Rokosh, SM, Gardner, WC	
Educating rangeland ecology and management professionals in the 21st century	179
Ingham, CS	
Sustainability and resilience of the Mongolian indigenous rangeland.....	184
Khaidav, D; Yundendorj, Ts; Sodnom, M.	
Pastoralist at the crossroads: the struggle for land ownership and forceful relocation. A case of the Maasai pastoralists of Loliondo and Ngorongoro in Tanzania	188
Laizer, J; Lekaitogo, J; Masanja, J; Nashipai, C; Mushy, R	
History of the Pastoral Board of South Australia and the <i>Pastoral Land Management and Conservation Act 1989</i>	193
Maconochie JR ; Nicolson AB ; Peacock, S	
The significant contributions of women in ethnobotanical studies enhance the diversity of wild edible plant uses	197
Majid, J; Abedi, M; Memariani, F; Ghorbani, A	
Adaptation strategies of pastoralists to degradation of Banni grassland in India through livelihood diversification.....	202
Manjunatha, BL; Sureshkumar, M; Hajong, D; Tanwar, SPS	

Enabling public access to South Australia’s pastoral lands.....	207
Nichols, C; Yates, M	
The ‘Drought Antidote’ : An archaeology of artesian water management in NSW	212
Phelps, JEG	
Fate of yak herding in the highlands of Mustang, Nepal: A case of Namu Bhrapse Rangeland.....	217
Sanjyal, S; Joshi, S; Gorkhali, N; Dhakal, B	
Agricultural developments on the rangelands of the Tibet Autonomous Region in China, with a special emphasis on the role of Tibetan women.....	220
Spiegel, NB; Rose, CM	

THEME 2. CO-DESIGN, PARTNERSHIPS, AND INCORPORATING TRADITIONAL KNOWLEDGE FOR MORE ENDURING RANGELAND OUTCOMES.....226

Bridging Perspectives – Indigenous, Non-Indigenous, and Traditional 226

A comprehensive analysis of pastoral traditional knowledge functions	227
Chao, O; Li, X; Reyes-Garcia, V	
Interdisciplinary investigations identify local knowledge important for pastoralist adaptation to climate change in Montesinho (Portugal).....	232
Aleixo-Pais, I; Castro, J; Frazão-Moreira, A; Castro, JP; Castro, M	
Aboriginal and white pastoralist history — the positive stories	236
Kelly, DM	
Key lessons learned when supporting Indigenous scholars and communities during co- creation of knowledge	241
Reid, RS	
International cooperation to improve forage supply in grasslands in Kenya and Tanzania	247
Guzmán, FD; Ledesma, RR; Alberghini, JP; Nenkeri, H; Sangula, A; Okore, C; Kidake, B	

Collaborations for rangeland restoration and conservation 251

Increasing rangeland resilience through collaborative, climate-adaptive, community- engaged rangeland restoration with the Ute Mountain Ute Tribe in Southwestern Colorado, USA.....	252
Lockard, EL; Bradbury, ES; Bruegger, RA; Stoner, D; Swartz, EH; Havrilla, CA	
Knowledge co-production between herders and scientists for the better management of species-rich pastures.....	257
Molnár, Z; L. Sáfián, L; Barta, S; Sharifian, A	
Protection of sacred springs in South Australia’s rangelands	263
Smith, A; Gerlach, CA; Warren, F; Dadleh, K; Booth, F	
Great Plains Grassland Extension Project: Tackling big conservation challenges through collaboration and cooperation	268
Baldwin, C; Fogarty, D; Hovick, T; Treadwell, M; Matzke, C; Thompson, A; Goodman, L; Spackman, C; Cram, D; Overlin, A; Bruegger, R; Twidwell, D; Scasta, D; Beaver, J; Bauman, P;	
Building public awareness for rangelands and pastoralists via social media and the FIFA World Cup 2026	272
Audoin, F; Lekaitogo, J; Chen Y; Dosamantes, EG; Coppock, DL	

Collaborative approach to grazing management	277
Participatory rangeland management (PRM): from concept to continental scaling	278
Flintan, F; Otieno, K; Sircely, J; Nganga, I; Eba, B; Mukalo, I; Faustin, Z; Akilmali, A; Ngurumwa, P; Ouma, D; Olesikilal, B; Ebro, A; Okoth, J; Akiyaga, A; Gudina, D; Irwin, B	
Diverse Adaptive Landscape-Livestock Interaction approach to beneficial grazing management in Canadian prairie rangeland production systems	282
Schellenberg, MP; Pittman, J; Williamson, K; Tastad, A; Harrison, T; Todd, K	
The Rangelands Living Skin project: lessons for co-designed, collaborative research in rangelands.....	287
McDonald, SE; Plumbe, M; Orgill SE; Andersson, K	
Collaborative Adaptive Rangeland Management: Lessons learned and opportunities awaiting from the first decade	292
Derner, JD; Augustine, DJ; Porensky, LM; Hoover, DL; Ritten, JP; Kearney, SP; Peck, DE; Ma, L; Merideth, G; Wilmer, H; CARM Stakeholder Group.	
12 years of grassland board in Uruguay	297
Cáceres Bentancor, D; Pereira Machín, M	
WAARC, a state government funding initiative to catalyse agricultural research in northern Western Australia	301
Thomas, D; Biddulph, B; Blenkinsop, K; Crisp, J; Moynihan, K; Pearce, K; Soheli, F; Stewart-McGinniss, V	
Valuing traditional and Indigenous knowledge: evolution, threats and opportunities	305
Mongolian herders' plant knowledge: intergenerational transfer and change	306
Jamsranjav, C; Fernández-Giménez, ME	
Pastoral traditional knowledge in East Ujimchin Banner, Inner Mongolia	311
Chao, O; Reyes-García, V; Molnár, Z; Li, X	
Use of ethnoveterinary practices among transhumant/pastoral farmers in hilly areas of Jammu and Kashmir, India.....	316
Azad, MS; Choudhary, SI; Kour, K; Upadhyay, L	
Analysing the Indigenous knowledge contributing to the survival of pastoralists in northern Kenya's dry areas.....	321
Kagunyu, A; Wandibba, W; Thurair, E	
The science-policy adaptive capacity building for local herding and government groups to reduce climate vulnerability: case of Gobi-Altai province, Mongolia.....	326
Balt, S; Khurel, N; Bolor, K	
Poster presentations – Theme 2	330
Building a community of practice around the network of rural	331
living labs of the Grassland Management project in Uruguay	331
Areosa Aldama, P; Pereira Machin, M; de Hegedus, P	
Meal Plate Index: A simple and robust tool for decision making	335
Carriquiry, E; Duarte, E; Pereira Machin, M	
Rangeland monitoring can engage graziers	341
Hough, B	
Beyond grasslands: valuing the societal contributions of India's rangelands and pastoral systems	346
Hussain, S; Narula, V	

The role of pastoralists' indigenous knowledge in managing South African mesic and semi-arid rangelands	351
Ntombela, K; Samuels, I; Finca1, A; Engelbretch, A; Zondani, T	
Typology of subjectivities in relation to grass management	355
Pereira Machin, M; Areosa, P; Carriquiry E; De Hegedus, P	
Arizona/Utah range workshop and tour – building on 46 years of success	360
Scow, B; Heaton, M; Brischke, A	
Case study of Extension outreach to a small acreage and urban grazing operator in Salt Lake County, Utah, U.S.A.....	365
Wagner, KM; Greenhalgh, L; Miller, R.	
Finding common ground: Collaborative adaptive management for conservation and livestock-based livelihoods in the Greater Yellowstone Ecosystem	371
Wilmer, H; Spiess, J; Munger, W; Wilson,C; Fanok, L; Windh, J; Anderson, D; Burns, A; Derner, JD; Crootof, A; Anderson, M; Clark, P; Taylor, JB	

THEME 3. TECHNOLOGY, INFORMATION SYSTEMS, COMMUNICATION, AND BIG DATA TO AID MONITORING AND DECISION MAKING 377

Data collection and data platforms	377
The value proposition for systematic long-term vegetation studies.....	378
Specht, A; Bastin, G; Carter, J; Cowley, R; Diete, R; Facelli, J; Maurer, G; O'Reagain, P; Thornton, C	
Review of a regional scale grassland condition monitoring method	383
Ryan, K; Thomas, P; Hetherington, C; Martin C	
Use of commercial rumen boluses to evaluate hot and cold weather impacts on cattle grazing rangelands.....	391
Bailey, DW; Barto, AO	
Construction of a 200-year annual domestic livestock distribution geographical dataset for Australia for the pre-digital era 1788 to 1980.	398
Irvine, SA; Carter, JO; Stone, GS	
Decision support – models and tools for integrated rangeland management	403
Back to the future – site, science and sustainability.....	404
Whish, GL; Pandeya, HR	
On-animal sensors: measuring grazing cattle behaviour under two different supplement strategies.....	412
Freitas-Kirk, T, Eyre, KE, McCosker KD, Prada e Silva, L	
A quick meal plate index and its use as a decision-making tool for ranchers.....	417
Duarte, E; Dieguez, F; Pereira, M	
Quantifying ecosystem services: A conceptual framework for regenerative agriculture in Western Australia's rangelands.....	422
Jayasinghe, SL; Thomas, DT	
Predicting drought using remotely sensed vegetation cover	428
Leys, J F; McDonald, SE; Turnbull, GL	
A tool for guided state and transition model development based on ecological theory	433
Bestelmeyer, B.T; Williamson, J.C; and McCord, S.E	
Rangeland mapping technologies and tools	438
Mapping depleting aquifers in drylands and the impact on net primary productivity	439
Gilbert, WQ; Washington-Allen, RA	

Accurate modelling of photosynthetic light responses of C ₃ and C ₄ species.....	444
Zhou, S-X; Yang, X-L; Ye, Z-P; Han, G-D	
Accounting for carbon stock change in Australia's rangelands – a hybrid approach using remote sensing and empirical modelling.....	450
Rosauer, DF; Pasut, C; England, JR; Forrester, DI; Piper, M; Caccetta, P; Chia, J; Levick, S; Paul, KI	
Assessment and mapping of rangeland health in East Africa and globally	456
Vågen, T-G; Robinson, NP; Bagues-Tobella, A; Winoweicki, LA	
Mapping the condition of Queensland's grazing lands	460
Beutel, TS; Graz, FP; Trevithick, R and Hassett, R	
Rangeland monitoring models and techniques	465
Structural diversity in rangelands: a framework for quantifying what makes a functional rangeland	466
Olsoy, PJ; Copeland, SM; Caughlin, TT; Duquette, CA; O'Connor, RC; Boyd, CS	
Assessing woody plant health in rangeland ecosystems: implications for estimates of aboveground biomass	472
Piper, MC; England, JR; Paul, KI	
DAVE-Grass: a process-based model for herbaceous vegetation dynamics.....	480
Knauer, J; Holzworth, D; Inbar, A; Stephens, C; Williams, L; Medlyn, BE	
Harnessing Landsat fractional cover time series to monitor dryland ecological integrity at multiple scales	486
Sutton, AM; Fisher, AG; Eldridge, DJ; Metternicht, GI	
What standard error metrics don't tell us about model performance – a fractional cover use case	493
Watson, F; Denham, R	
Technological innovation and access: novel opportunities for rangeland communities	499
Better Connected: building connectivity skills towards technology adoption to support rural, regional, and remote business and community.	500
Hay, R; Wilson, CA; Harrington, W; Sparrow, K	
Factors influencing adoption and sustained use of agricultural technology in grazing systems of Central Queensland	508
Barker, J; Trotter, MG; Williams, TM	
Long-term chemical management of undesirable brush on southwestern U.S. rangelands	513
Medlin, CR	
Greenhouse gas mitigation strategies in East African pastoral systems: beyond technical solutions	517
Ash, R; Höglund-Isaksson, L	
Information technologies to empower and support land managers to participate in carbon farming projects: a case study from Australia's rangelands.....	525
Ferguson, T; Emms, J	
Remote sensing for rangeland management.....	530
Leveraging Earth Observation services for enhanced livestock farming productivity	531
Domenech, C; Suárez, J; De la Fuente, D	
Integrating drone technology into rangeland management: plants, livestock, and wildlife	538

Perotto-Baldivieso, HL; Perez, KF; Goodwin, DJ; Avila-Sanchez, JS; Massey, L; Gleason, SR; Tanner, EP; Ortega-Santos, JA	
Fusion of pixel & object-based image analysis to improve stratification of soil carbon projects in the semi-arid rangelands, Australia	544
Newey, L; Hackney, B; Rigg, JL; Wicks, T; Orgill, SE	
Integrating remote sensing and in pasture weighing technology to estimate dry matter intake for grazing beef cattle	549
Brennan, J; Ehlert, KA; Leffler, AJ; Menendez, H; Smith, Z; Abalo, M; Rekabdarkolace, HM	
The application of state-and-transition models to remotely sensed vegetation cover datasets.	554
Phipps, L; Stringham, TK; Lieurance, W; Albright, T; Verberg, P; Meiman, P	
The role of technology in facilitating collaborative rangelands research.....	559
Continental-scale modelling of pasture growth with the AussieGRASS model: Learnings from 30 years of operation	560
Carter, JO; Bruget, D; Stone, G	
Quantifying and interpreting the utility of foraging behaviour metrics derived from on-animal sensors in extensive rangelands.....	566
Augustine, DJ; Kearney, S; Cunningham, S; Porensky, L; Scasta, JD; Raynor, EJ; Boudreau, M; Derner, JD	
Cattle daily movement distance & habitat selection relative to production stage, phenotype, and demographics in northern Great Plains rangelands	572
Hennig, JD; Scasta, JD; Beck, JL; Hill, JD; Stam, B	
Scaling rangeland restoration in East Africa through synergies in the biodiversity-water-climate nexus.....	577
Bargués-Tobella, A; Winowiecki, LA; Ahmad, M; Kiunga, W; Lundberg Ingemarsson, M; Mohamoud, A; Mpairwe, D; Munyua, D; Mureithi, S; Mwangi, A; Njihia, D; Norah, C; Nyberg, G; Okwach, L; Onkware, B; Robinson, N; Treydte, A; Turinawe, A; Öborn, I; Vågen, TG	
Assessing drought vulnerability and water resource management in the Great Artesian Basin: insights from GRACE data and climate projections under varying emission scenarios	581
Razeghi, M; Lyons, B	
Navigating technology adoption: mapping beef producers' decision journeys	587
Wilson, CA; Hay, R; McShane, C; Atkinson, I.	
Enhancing rangeland management through technology: a case study of sheep and goat grazing in Montesinho Natural Park	592
Castro, J; Fellahi, M; Benmellouk, I; Castro, M; Yessef, M	
Decision support tools for pastoralists and grazing systems	597
Big landscapes meet big data in StockSmart--grazing decision support with temporally and spatially explicit annual net primary production data	598
Hudson, TD; Hall, SA; Reeves, MC	
Plant production forecasting; current state and opportunities for advancing grazing land management	603
Schantz, MC; Hardegree SP	
Empowering producers with a national grassland biomass service	611
Scarth, P; Tickle, P; Rayner, A; Paton, J; Henry, N; Gill, W; Gill, T; Guerschman, J; Baylis, E; Kelly, L	
Collaborative intelligence: AI-driven decision support for beef production.....	615
Wilson, CA.; Naseem, U; Zhang, Z; Lu, H; Tao, L; Hay, R; Everingham, Y	

Evolving VegMachine.net: enhancing a successful tool for Australian rangeland cover analysis	620
Trevithick, R; Denham, R; Weis, G; Beutel, T	
Poster presentations – Theme 3	625
Carbon exported in runoff from grazed semiarid lands in the Fitzroy Basin, Queensland, Australia	626
Bosomworth, B; Lim, Y; Wellham, R	
Ecosystem integrity index (EII) in ranchers of the “grass management” project in Uruguay	631
Cáceres Bentancor, D ; Laborde, J ; Orihuela, D; Sancho, D; Beretta, A; Pereira Machín, M	
Digital virtual fence user guide for rangeland management	636
Dalke, A; Audoin, F; Noelle, S; Lien, A.	
Application of vegetation indices obtained from satellite images for the management of the Voisin rational grazing	641
Díaz-Ambrona, CGH; Rodríguez, RG; Montoya-Téllez, R	
Using optical remote sensing LAI for semi-natural grassland yields prediction in Noteć river valley.....	646
Goliński, P; Golińska, B; Czerwiński, M; Dąbrowska-Zielińska, K	
Cumulative ground cover maintenance: what does it tell us about the grazing landscape and its management?	651
Graz FP; Beutel TS	
There’s an app for that: development of a decision support tool for the management of Twolined Spittlebug on Hawaii rangelands	656
horne, MS; Wright, M; Wilson, S; Peck, D; Oshiro, M	
Rapid assessments of herbage biomass and quality using field hyperspectral (HS) measurements with 1D-CNN	661
Itoh, M; Kawamura, K ¹ ; Okoshi, S ¹ ; Hanada, M ¹ ; Yagi, T ² ; Sudo, K ² ; Lim, J ³ ; Doi, K ⁴ ; Saigusa, T ⁴	
AI modeling to predict vegetation diversity of protected rangelands in national parks	666
Jahani, A; Saffariha, M	
Evaluating the spatial distribution of cattle dung pats from UAV images in grazing ecosystems.....	671
Kawamura, K; Qingger; Itoh, M; Yasuda, T; Aozasa, E; Kato, M; Yayota, M; Kitagawa, M; Kunishige, K.	
Readily available: rangelands information and learning tools from the rangelands partnership	677
Kuden, JL, Pfander, JL	
Using historical photos to monitor long -term changes in South Australian rangelands ...	680
Lay, BG; Maconochie, JM	
Development and implementation of a forage management platform in Uruguay (‘iPasto’).	685
Lombardo, S; Pereira Machín, M; Terra A.	
Using crowd sourcing and geopositioned images to document near real time rangeland condition.....	688
Louhaichi, M; Cardoso Arango, JA; Kassam, S; Hassan, S	
Pastoralist piloted drone monitoring – drones as a tool not a toy	693
Marver, RM; Singh, HS	
High-performance forage classification models for smart agriculture: a study on Keras, SVM, and BPNN.....	698
Siddique, A; Terrill, TH; Panda, SS; Mahapatra, AK; Xu, Z; Van Wyk, JA	

The relationship between canopy volume and leaf dry matter of a shrub species on the west coast of South Africa	704
Swart, R; Saayman, N; Rheeder, C; Booyse, M; Kirkman, K	
Sustainable management to reduce grasslands grazing pressure and improve household income in northern China	709
Yuping Rong	

THEME 4. INTEGRATING RANGELAND ECOLOGY INTO MANAGEMENT

.....714

Ameliorating rangeland soil health..... 714

Soil microbial community and functionality in response to degradation in alpine grassland: a meta-analysis	715
Yuchen Li; Yingjun Zhang; Gaowen Yang	
Using gypsum to ameliorate a highly-saline, scalded claypan.....	720
Andersson, KO; Clarendon, S; Humbert, G; Conder, J; Schneider, D; Strong, C; MacDonald, SE	
Soil testing to support decision making in the rangelands	726
Andersson, KO; Orgill, SE; Strong, C	
Preserving and enhancing soil health in the rangelands of Uganda	732
Nakachwa, NF; Senkosi, K	
Pastures under pressure: restoration of high-altitude rangelands in Bhutan and Nepal	737
Srijana Joshi; Yi Shaoliang; Kesang Wangchuk; Tashi Dorji; Ramesh Timilsina; Rajesh K Rai	

Can herbivores be part of the solution? Grazing management for rangeland

restoration 742

Destocking of livestock as a global phenomenon	743
Sala, OE; Anadón, JD	
The Global Land Outlook Thematic Report on Rangelands and Pastoralists: framework and theory of change for sustainably managing and restoring rangelands	747
Herrera Calvo, PM; Alexander, S	
Herd effect and deep ripping to restore claypans in western New South Wales rangelands	753
McDonald, SE; Finlayson, G; Orgill, SE; Strong, C; Andersson, K.	
Effects of different intensity grazing on ground-dwelling arthropods, especially Coleoptera	758
Wang, YD; Shi, CJ; Li, YL; Cheng, JW; Li, FY	
Socio-economic and ecological factors influencing herder household mobility in Mongolian Steppe	763
Gonchigsumlaa, G; Damdindorj, S; Sukhbaatar, M; Gombodorj, B.; Ring, I.; Kasymov, U.; Mehring, M.; Dejid, N.; Tseren, T; Drees, L; Matias, D; Mueller, T; and Jäschke, Y.	
Linking rangeland condition to grazing management practices: lessons learnt from champion farmers in the grassland and savanna biomes.....	770
Finca, A; Ngoako, N; Ntombela, K; Pule, G; Zondani, T; Malepe, K; Tjelele, J; Samuels, I; Cupido, C	

Water ecology and management in rangelands..... 775

Exploring trade-offs between water and carbon linked to woody encroachment in a native semi-arid grassland, Eastern Cape, South Africa	776
Weideman, C.; Palmer, AR.; Smart, K	

Put your money where success has been – a rapid review of interventions to improve pastoral land condition in the southern rangelands of Western Australia	781
Penny, NR; Williams, AR	
Managing groundwater in South Australia’s rangelands.....	787
Smith, A; Short, J	
Creating and enhancing green spots in the arid zone of western NSW, Australia	793
Theakston, P; Dohnt, B	
Assessing sediment diatoms for water quality index in the protected wetlands of Vettangudi Bird Sanctuary, India.....	799
Kannan Dorai Pandian	
Effect of planting configurations and irrigation regimes on yield, quality, and economic returns of alfalfa-grass mixtures.....	804
Islam, MA; Munkaila, M.	
Controlling the invaders	809
Birds, lagomorphs, rodents, and patterns of <i>Juniperus osteosperma</i> recruitment	810
Schupp, EW; Gómez, JM; Fuentes, M	
Use of axillary buds and other demographic parameters to evaluate control strategies for perennial invasive grasses.	814
Hendrickson, JR; Toledo, D; Carrlson, AJ; Kobilansky, C; DeKeyser, ES	
It’s not the plants you can see but those you can’t see: managing Australia’s rangelands means managing pest rabbits.....	817
Peacock, D. E; Hutchinson, M. R	
Restoring the Banni grasslands: a model for combating invasive species, supporting natural ecosystem and empowering pastoral communities	822
Thacker, KD; Nanjar, B; Singh M; Rajput KS	
Evaluation of treatment type and grass species for restoring Artemisia-dominated rangelands in the Great Basin of North America	828
Thacker, E; Bryan, R; Clifford, A	
Fire for vegetation management in grazed rangelands	833
Char height on fence posts as a practical proxy of flame length and fire intensity in grass fires.....	834
Danckwerts, MJ; Midgley, GF; Beckett, H	
Mesquite (<i>Prosopis</i>) seedling responses to fire and grass production in the southern Great Plains, USA	840
Ansley, RJ; Zhang, T	
Lessons from a 30 year burning experiment in northern Australian grazed tropical savannas	845
Cowley, RA; Dyer, RM; Hearnden, MH	
Multi-species grazing, mob grazing, and fire effects on cool-season grass invaded rangelands of the northern great plains of north America	851
Toledo, D; Hendrickson, J; Liebig, M; Kobilansky, C; Carrlson, A; Kronberg, S; Christensen, R; Archer, D; Branson, D; Rand, T; Campbell, J; Igathinathane, C	
Understanding the system – rangeland dynamics and ecology	856
Effects of orientation on soil moisture, temperature, biomass production, and nutritional composition of natural grassland in the central Chile	857
Toro-Mujica, P; Muñoz, G; Lisboa, P	

Structure and phenology of herbaceous forage plants in the Sahelian rangelands of Senegal during the rainy season.....	862
Sawadogo I; Worou N; Bayen P; Kouassi F	
The photodegradation effect of plant litter in typical temperate steppe varies by the litter state and age	867
Xing P; Li F	
Exploiting polyploidy in <i>Pennisetum Purpureum</i> to increase forage yield, feed value and tolerance to diseases	873
Wafula, RM; Muyekho, FN; Muleke, EM; Wamocho, LS; Hoka, AI	
Seasonal variation in litter decomposition rates: a comparison of spring- and autumn-detached litter in a steppe grassland ecosystem	881
Wang, YN; Xing, PF; Jia, RY; Cheng, JW; Wang, N; Wu, L; Frank YL	
Grazing and ecohydrology for ecological health	888
Restoration techniques of rangelands in the hyper-arid area of central Saudi Arabia	889
Weijerman, M; Al-Harigi, TA; Al-Shlash, KS; Al-Zahrani, AM	
Ecological regeneration in a low rainfall environment using long-rest grazing management	895
Kerr, JG	
Ecohydrological resilience of sagebrush rangelands following tree encroachment	900
Williams, CJ; Phelps, EL; Johnson, JC; Polyakov, VO; Rutherford, WA	
Interaction of plant functional traits of <i>Stipa tenacissima</i> L. in arid montane rangelands and grazing frequency.	906
Msadek, J; Tarhouni, M	
Local flora for ecological restoration: the flore project	911
Carita, T.; Simões, N.; Carneiro, J.P.; Reis, P.	
Management for biodiverse rangelands	915
Restoring biodiversity in a hyper-arid desert ecosystem in Saudi Arabia.....	916
Weijerman, M; Nawaz, R; Al-Abdulwahab, AM; Al-Shlash, KS; Al-Harigi, TA	
Grazing management and low-stress herding to prevent livestock predation by grizzly/brown bears: a case study in the Rocky Mountains, USA	921
Barnes, MK	
Fencing the future: enhancing livestock management and wildlife conservation with virtual fencing	926
Bennett, DE; Berman, C; Brammer, T	
Frequency distribution, species richness and egg per gram of gastrointestinal parasites in free-ranging <i>Papio Ursinus</i> species in a semi-arid savanna ecosystem of Zimbabwe	931
Banda, A; Moyo, DZ; Ncube, N; Utete, E; Gandiwa, E	
Soils and rare plant habitat in the Colorado Plateau	936
Boettinger, JL; Schupp, EW	
Management impacts on rangeland soil carbon and nitrogen	941
Conventional grazing decreases soil organic carbon by destroying physical and mineral protections	942
Wei, B; Wei, YQ; Zhang, RH; Zhang, YJ; Liu N	
Moderate grazing helps reduce greenhouse gas emissions from typical steppe	948
Wang, H; Li, FY	
Defoliation effects on carbon allocation in grasslands	954

Ruihuan Zhang, Chujun Dong, Bin Wei, Yexu Zheng, Nan Liu, Yingjun Zhang Large ungulate grazing effects on soil carbon sequestration: evidence from a field-simulated grazing experiment	958
Nan Liu, Ruihuan Zhang, Yuqi Wei, Hailing Luo, Yingjun Zhang	
Impacts of fire on rangeland vegetation and diversity.....	963
Effectiveness and durability of common fuel treatments in sagebrush-dominated rangelands	964
Ellsworth, LM; Strand, EK; Williams, CL; Reeves, M; Short, K; Chambers, JC; Newingham, BA	
Effect of prescribed fire on plant α - and β -diversity and their spatial patterns in mesquite-oak savanna	969
Jaime, XA; Angerer, JP; Yang, C; Tolleson, D.; Mata, J; Gao, W.; Li, Z.; Fuhlendorf, SD; Wu, XB	
Historic fuel treatment effects on plant community dynamics following wildfire	974
Newingham, BA; Donoso, MU; Williams, CL; Howard, BK; Ellsworth, LM	
Frequent prescribed fire contributes to soil organic carbon sequestration and pyrogenic carbon stability in South African mesic grasslands.....	979
Nicolay, R; Tedder, M; Mkhize, N; Kirkman, K	
Woody species composition, diversity and vegetation structure of two rangelands areas along a climatic gradient in Burkina Faso (West Africa)	984
Sawadogo I; Worou N; Bayen P; Kouassi F	
New shoots – Reseeding and planting for rangeland restoration	990
Active restoration improved self-restoring ability in extremely degraded alpine meadow	991
Zhanhuan Shang	
Enhancing rangeland sustainability by reseeded legumes in temperate steppe.....	997
Chuan Guo, Yue Pang, Meiqi Guo, Jiqiong Zhou, Hao Zhang, Nan Liu, Yingjun Zhang, Gaowen Yang	
Enhancing the resilience of Saharan rangelands by reseeded drought tolerant native shrubs: the case of <i>Lygos raetam</i> in southern Tunisia.....	1003
Ouled Belgacem, A; Ben Abdellatif, M.; Louhaichi, M	
Re-seeding on highly degraded rangeland as strategy for forage production, biodiversity, and carbon sequestration in Ethiopia	1007
Eba, B; Lelisa, A; Gedda, A; Asfwu, I	
Development of an environmental decision support system for predicting the natural distribution of <i>Festuca ovina</i> in land restoration efforts	1012
Saffariha, M; Jahani, A; Roche, LM; Hosseinnajad, Z	
Four spinifex species of the East Kimberley.....	1017
Wright, ALJ	
Poster presentations – Theme 4	1022
Determination of browse production, browsing capacity and implications on bush encroachment and livestock feed resources in rangelands of Southern Ethiopia	1023
Abule, G; Alemayehu, M; Bedasa, E	
Bazarragchaa, A; Batdorj, G; Radnaa, J	
Developing a national kangaroo strategy	1033
Bracks, J; Wilson, G	
Characterization of pastures legumes with potential for biomass production and for mediterranean pastures restoration.....	1041
Carita, T; Pereira, G	
Physiological advantages observed in a C ₃ grass invading C ₄ grasslands	1045
Cooper-Norris, C.E.; Harvey, J.G.; Norris, A.B.	

Rangeland Management Practices Used to Increase Usable Habitat Space: A Case Study with Greater Sage-Grouse	1050
Dahlgren, D. K.; Thacker, E. T., Carter, R.	
Cacti biocontrol in the South Australian Arid Lands	1056
Eager, C	
The Koonamore Project: 100 years of research in a short-term rangeland ecology study	1061
Facelli, JM; Ladd, D; Sinclair, R	
What limits seed-based restoration: seeding methods or environmental constraints?	1065
Farzam, M; Chiarenza, G; Vear, A; Van Leeuwen, S	
Insights into spinifex (<i>Triodia</i> species) pastures and their management	1070
Fletcher, M; Gibson, L; McDonald, M; Mackay, G; Wilson, N	
A book on the rangelands of Libya	1075

The effects of different restoration measures on plant diversity and carbon sequestration in pastoral ecosystem.....	1250
Zhi, L; Yu, T; Li, Y; Zhang, Z; Shi, M; Yan, Ruirui; Bai, Keyu	

THEME 5. MANAGING RISK – CLIMATE AND OTHER SYSTEM SHOCKS AND TRENDS 1257

Climate change impacts and ecological resilience 1257

South African mesic grasslands are resistant to drought but not warming	1258
Tedder, MJ; Maziko, Y; Mbambo, ST; Madikizela, P; Ojo, TA; Kirkman, KP	
Temperature change in central Australia: episodic warming	1263
Curran, GC	
Wealth creation, income distribution, and adaptation among Sahelian (agro)pastoralists in a shock-prone environment.....	1268
Wane, A; Touré, I; Mballo, AD; Ndiaye, A; Souli, Z; Botoni, EY; Tankari, I; Diao, MB	
Climate change projections and their impact on grassland systems: a longitudinal study in central Spain.....	1273
Aragón-Pizarro, M; Sanz, E; Almeida-Ñauñay, A.F; Tarquis, AM; Díaz-Ambrona, CGH	

Enhancing adaptive capacity to climate-related risks 1278

How are global megatrends likely to provide opportunities and challenges for Northern Australian rangelands?	1279
Penrose, B; Greenwood, S; Mayberry, D; Perry, L	
Resistance to water deficits and recovery post-stress of native and naturalized grasses from Campos grasslands	1284
Jaurena, M; Cardozo, G; Lattanzi, FA; Carrasco, A; Juárez, N; Durante, M	
Assessing trigger points for flexible livestock management decisions in rangelands	1291
Badgery, WB; Alemseged, YA; Millar, GM; Atkinson, T; Smith, W; McDonald, SE	
Resilient livelihoods: re-examining mobility social solidarity for climate change adaptation in east Africa's drylands.	1297
Tahira Shariff, M	
Impacts of covid-19 lockdown measures on pastoralism on the Tibetan plateau: risk analysis of pastoralism under increasing marketization.....	1304
Puhua X; Qin Q; Li WJ.	
Can legume inclusion in pasture systems improve forage carbon ($\delta^{13}C$) and nitrogen (δN) nutrition? Findings from Tsolo, Eastern Cape, South Africa.	1324
Gulwa, U; Magadlela, A	
The grazing effects on GPP in Inner and Outer Mongolia grasslands under climate change and divergent grassland use systems	1331
Guo, JP; Shi, CJ; Zhao, YH; Li, HX; Wang, YD; Xing, PF; Li, YL; Wang, H; Ma, ZY; Zhou, YX; Hu, Q; Frank Li, YH	
Understanding the challenges in Libyan rangeland conservation: exploring pathways to sustainable rehabilitation.....	1336
Saaed, MWB	

Modeling the distribution of <i>Vachellia tortilis</i> (forssk.) in Tunisian drylands under climate change scenarios.....	1341
Msadek, J; Tarhouni, M	
Central Asian Winter Cold Desert Rangelands (CACDR): Climate-smart approaches towards restoration and conservation	1346
Khujanazarov, T; Toderich, K; Gintzbuger, G; Matsuo, N; Rajabov, T; Mukimov, T; Khasankhanova, G; Qurbanov, A; Khabibullaev, B; Tolibaev, E; Myachina, O; Shuyskaya, E	
Innovative tools for addressing risk	1353
Predicting forage production into the future	1354
Becchetti, TA; Taylor, A; Feirer, S; Kelly, M; James, JJ	
Impact of drought and flood on land condition across Mitchell Grass Downs rangelands	1358
Koci, J; Tefera, A; Hall, T; Milson, J; Phelps, D; Jarihani, B; Nelson, PN; Felderherhof, C; Gardner, L; Wharton, P; Martinez, M	
Assessing the environmental footprint of grazing bison in the United States	1363
Cammack, KM; Menendez, H; Husmann, A; Brennan, J; Zuidema, D; Antaya, A; Blair, A	
Testing virtual fencing for the sustainable management of north Australian rangelands: Impacts on beef cattle grazing behaviour, pasture resource, and cattle production.	1368
Muller, J; Spiegel, NB.	
Evaluation of herd instinct tags on cattle behavior and spatial distribution	1374
Norris, AB; Aviles, D; Cooper, CE; Baize, J	
Resilience and adaptation among pastoralists	1379
How rural Mongolians understand climate change: knowledge, attitude and practice survey	1380
Bayarmaa Enkhbayar, EBA	
Attentive maintenance models of social-ecological pastoral systems	1384
Burnett, T.J	
De-risking, inclusion and value enhancement of pastoral economies (drive) project in Kenya	1390
Nenkari, H; Ouma, M; Mbaka, M; Muimi, D	
Strategies for building resilient pastoral and agropastoral systems in Africa	1394
Whitbread, A; Baba B, Banerjee, R; Dhulipala, R; Flintan, F; Houessionon, P; Joseph, E; Olesikilal, B; Paliwal, A; Sarr, A; Shikuku, K; Sircely, J; Worou, ON; Wane, A	
<i>Mucuna pruriens</i> -based feeds that improve sustainability of communal goat farming during the dry season in semi-arid savannah of southern Africa	1400
Manyawu GJ, Rukuni T, Kapembeza C, Baleni T, Sisito G, Chakoma I, Hlatshwayo A, Musendo B. and Dube S.	
Poster presentation – Theme 5	1407
Climate-smart legume-grass system can reduce greenhouse gas emissions and net SOC	1408
Arshad, A; Hou, F	
Business planning for drought preparedness and resilience in the variable climate of Northern Australia	1414
Baker, KM.	
The immediate and long-term effects of aridification in a developing country context: The Karoo, South Africa.....	1420

PLENARY PAPERS

The adaptive systemic approach: equitable co-design and partnerships for sustainable multi-use rangelands in Tanzania, Ethiopia, and South Africa

Palmer, CG¹; Senga, MA²; Woldu, Z³; Bantider, A⁴; Gussha, B¹; Norbert, J⁵; Tanner, JL¹

¹ Institute for Water Research, ARUA Water Centre of Excellence, Rhodes University, South Africa;

²Department of Sociology and Anthropology, University of Dar es Salaam, Tanzania, ARUA Water CoE; ³Department of Botany, Addis Ababa University, ARUA Water CoE; ⁴Land and Water Resources Centre, Addis Ababa University, ARUA Water CoE; ⁵Institute of Resource Assessment, University of Dar es Salaam, Tanzania, ARUA Water CoE.

Key words: complex social-ecological systems; rangeland co-operation; strategic adaptive management.

Abstract

Building effective equitable partnerships and implementing co-designed projects and/or interventions to sustain multi-use rangelands, takes time, sustained commitment, and resources. There are pitfalls. Teams in three African countries used the collaboratively developed Adaptive Systemic Approach (ASA) to navigate these processes. We present a summary of the ASA and findings from its application. Key ASA strengths included: partnership building; enabling co-design; and capacity building through transformative social learning (explicitly respecting and integrating different knowledge forms: academic, practice-based, indigenous). We identify pitfalls: inadequate capacity building across academic disciplines, patchy facilitation skills, process discontinuities (e.g. changing representative participants), inattention to language and translation, power imbalances, and experiences of disrespect. We present adaptations to mitigate pitfalls. In all three contexts we aimed to move towards increased capacity for participatory governance, and an increased likelihood of improved rangeland condition and sustainable livelihoods. 1) The Great Ruaha River catchment (Tanzania), exemplifies challenges related to unequal water resources sharing, and ongoing contestation among competing water users, including communal livestock farmers, crop farmers and other community members. ASA engagements included these marginalised groups, addressed longstanding power imbalances, and set the groundwork for future collaborations. 2) Current vegetation cover in the Upper Blue Nile River basin (Ethiopia) reflects a complex interplay of human activities including grazing, cultivation, and selective fodder cutting; interwoven with the influences of climate, soil, and geology. A long-term restoration initiative in the Aba Gerima and Debre Yaqob catchments focusses on managing vegetation cover and the balance of woody plants and grasses. Using the ASA, communities in the two catchments co-developed strategies for rangeland and livelihood sustainability. 3) In the Tsitsa River catchment (South Africa) the appointment of eco-rangers, and early steps towards agreements for rotational grazing of multi-owned herds, in the degraded free-range communal rangeland, emerged from participatory ASA processes.

Introduction

Across Africa, rangelands are used by people with livestock for cultural, economic and food production purposes (Homewood 2004). As competition for rangeland use increases, contestation emerges (Samuels et al. 2021). It

takes time, sustained commitment, and resources to build effective equitable partnerships and implement co-designed projects and/or interventions that catalyse change towards social justice and ecological sustainability - social-ecological justice (Wolff et al. 2019). There are pitfalls. We consider contexts in three African countries, two where livestock grazing has impacted vegetation cover, rangeland health and livelihoods, and one where livestock owners are scapegoated for water scarcity problems. In each context we applied the Adaptive Systemic Approach (ASA)(Palmer et al. 2023, Palmer and Tanner 2024). We qualitatively evaluated the indicators: partnership building; enabling co-design; effective communication; and developing participatory governance capacity and capabilities through transformative social learning. We discuss the implications of practising the ASA in rangeland management and restoration.

Methods

The Adaptive Systemic Approach (Palmer et al. 2023) (Figure 1) emerged from the literature on Adaptive Management (Allen and Garmestani 2015), the emergence of Strategic Adaptive Management (SAM) (Rogers and Luton 2011), and practice in the Tsitsa River catchment (Cockburn et al, 2018) - that included participatory monitoring, evaluation, reflection, and learning (Rosenberg and Kotschy 2020).

Figure 1. The Adaptive Systemic Approach (ASA) (1-3) begins with a contextual analysis termed “Bound” because systems have porous boundaries, influencing and being influenced by neighbouring systems. The Bound phase (1) includes early stakeholder mapping and engagement. Strategic Adaptive Management (SAM) was built on the tradition of adaptive management, with strategy conferred by an Adaptive Planning Process (APP) (2). When the ASA was developed, SAM did not include governance, or monitoring and evaluation with reflection and learning. The first participatory ASA event is a facilitated SAM Adaptive Planning Process (APP) workshop (2), where stakeholders experience participation, and begin a journey of participatory governance capability development (3a). The APP gives rise to an objectives hierarchy – the blueprint for strategically and adaptively managing a system. SAM can be used to manage a problem being faced collectively by stakeholders, and also in the management of their home institutions. The ASA initiates the development of SAM capabilities (3b). Concurrently, additional research into the collective problem may be undertaken, and in all participatory engagement stakeholders learn from each other (transformative social learning) – fostering the ongoing co-creation of new knowledge (3c). Adaptive monitoring and evaluation, with reflection and learning is applied in each of the ASA activities, including facilitation planning and debriefing.

The full ASA was applied in Tanzania and Ethiopia. In South Africa, it was applied in the earlier Tsitsa River catchment forum (Cockburn et al. 2018). Detailed engagement data are curated at the Institute for Water Research, Rhodes University, South Africa. Here, we qualitatively assessed the key features of ASA practice claimed by Palmer et al. (2023): *Partnership building*, *Developing participatory governance capacity and capabilities*, *Transformative social learning* and *Enabling co-design*; in the three country-based case studies. Outcome achievement was judged as 1) minimal, 2) moderate, or 3) substantive.

Results

Tanzania: Ruaha River catchment in the Rufiji River basin

The Ruaha River catchment, Tanzania, is characterised by inequitable water sharing, and ongoing conflict among competing water users that include expanding towns, large- and small-scale farmers in the Usangu plains; pastoralists and fisherfolk in seasonal wetlands and in the Ihefu permanent swamps; and the wildlife ecosystems of the Ruaha National Park. The Ruaha River also sustains electricity production at the Mtera and Kidatu hydropower plants, with new hydropower development planned. Among these, small-holder irrigation and mobile pastoralists were blamed for reduced streamflow.

Partnership building, *Developing participatory governance capacity and capabilities*, and *Transformative social learning* were moderate among the wide spectrum of participating stakeholders. Analysis of participant reflections indicated intractable power differences despite evident co-learning and knowledge exchange among stakeholders. Continued application of the ASA would aim for slow trust-building, and data sharing to demonstrate the level of inequity, and the low level of threat from smaller resource users, in comparison to large-scale agriculture and hydropower. In the Ruaha, water-use conflict is more intense than rangeland-use conflict for livestock owners, and delinking grazing impact from water use would be helpful. *Enabling co-design* was minimal in the timeframe of the research engagement.

Ethiopia: Aba Gerima and Debre Yacob sub-catchments in the Upper Nile River basin

Landscape restoration activities, with restricted grazing and delivery of rangeland forage by “cut and carry” enabled livestock production and rangeland recovery (Feoli et al. 2002). Restoration practices were more rigorously maintained in Aba Gerima. The ASA Adaptive Planning Process workshop enabled the two catchment communities to meet, collaborate and learn from each other. They co-developed a vision and objectives that included a renewed commitment to cut and carry, to support livestock and rangeland improvement in both sub-catchments.

Partnership building, Developing participatory governance capacity and capabilities, Transformative social learning and Enabling co-design were all substantive at the scale of communities in the two sub-catchments interacting with each other and with researchers. These indicators were progressed in the preparation for, and facilitation of the Adaptive Planning Process workshop. Clear objectives for community livestock and landscape restoration and sustainable management were agreed. Progress in all these indicators was minimal at the scale of community-government engagement. The most immediate reason was the civil conflict in the region. However, researcher-government engagement was slow, and deepening research-government relationships, and extending these to include communities, would have required more extensive trust-building and communities travelling to the capital, Addis Ababa, for a “learning words” process prior to government engagement (Palmer et al. 2022, Palmer and Tanner 2024).

In engaged, transdisciplinary sustainability research, time frames are crucial (Palmer and Tanner 2024). Aba Gerima and Debre Yacob catchment had been the focus of Ethiopian research engagement over decades, and the success of landscape restoration was already evident (Feoli et al. 2002). The three-year ASA project came in as a

facilitated intervention to encourage and renew sustainable pastoral grazing when cut and carry efforts had flagged in one of the catchments. It effectively catalysed renewed sustainability practice.

South Africa: Tsitsa River catchment in the Mzimvubu River basin

The Tsitsa River catchment is a strategic water resource in South Africa. However, historical land-use practice has resulted in extensive erosion and vegetation cover loss which threaten the effectiveness of any dam development (Powell et al. 2018). Water resource development needs motivated investment in landscape restoration. The seven-year Tsitsa Project (Cockburn et al. 2018) constellated many of the ASA elements and the Tsitsa River catchment was a learning catchment for the Tanzanian and Ethiopian cases.

Partnership building, Developing participatory governance capacity and capabilities (Palmer et al 2022), Transformative social learning (Weaver et al. 2023) and Enabling co-design (Fry et al 2024) were substantive. The research had time to facilitate the development of community livelihoods, with a focus establishing nurseries to grow the plants used in landscape restoration, and the employment of eco-rangers to control free-range livestock movement. This is an alternative to the “cut and carry” methods used in Ethiopia. The timeframe of the Tsitsa catchment intervention was not long enough to measure vegetation cover increases, so the appointment of the eco-rangers was the measurable impact on the rangeland of the engaged research.

Discussion

The ASA provides natural and social scientists with the conceptual and practice tools to effectively engage with natural resource users (like pastoralists) and managers, civil society, powerful private enterprise, and government agencies, with the purpose of moving rangelands towards social-ecological justice and sustainability. However, the reality of engaged transdisciplinary work is hard (Palmer and Tanner 2024). As we advocate for rangeland researchers, managers, and governments to use the ASA, we highlight one lesson from all our experience: the fundamental importance of epistemic justice – fairness in relation to knowing. The two core aspects of epistemic justice in transdisciplinary participatory engagements are, that all participants i) experience being equally and well respected, and ii) have sufficient understanding and vocabulary to both understand and contribute to participatory knowledge exchange. Engagement planning and facilitation style are key in achieving this. Early engagement in the Tsitsa River catchment revealed that while facilitation skills such as eliciting input from participants randomly (rather than preferencing those with higher perceived status or power) and writing participant input on sheets that everyone could see, in exactly the words used, resulted in experiences of being respected. It was harder to build equitable knowledge and vocabulary, and respect for a range of knowledge forms. Knowledge was unevenly held and respected. In the Ruaha and Tsitsa River catchments formally educated participants were impatient, and discounted the value of local knowledge, while local communities needed time, were sensitive to disrespect and could be easily silenced. It was hard to overcome entrenched gender and racial prejudice. The development of the Learning Words processes in the Tsitsa project (Palmer et al. 2022) was crucial: stakeholder participants who are residents in the landscape meet with researchers the day before a general stakeholder workshop. Their local knowledge is elicited, and they are exposed to how deep their knowledge is, and that other stakeholders know far less. They are encouraged to share their knowledge in the engagement to come. Researchers then introduce any specialist vocabulary likely to be used the following day. Very often residents understand the concept – but may have a different set of words – for example not all languages have a direct word for “catchment” or “landscape. Learning Words workshops need to be routinely incorporated into the ASA process. In all our case studies engagement with local communities was undertaken in their local language, with translation for participants who only spoke English. (A sound colonialism push-back.) Adaptation to the pitfalls of practising the ASA included working to expose both specialist natural and social scientists to foundational ASA concepts such as complex social-ecological systems, transdisciplinarity and transformative social learning. We exposed the depth of gap between the social and natural sciences and the need for work on conceptual similarities with different vocabulary, methodological differences, and engendering sufficient respect for researchers to take the time collaborate effectively. We exposed the need for training in epistemic justice-sensitive facilitation.

Inclusion of epistemic justice, the methods of Learning Words, and the wider framework of the ASA can contribute to several *IYRP themes*: The ASA provides a purposeful mechanism for *connectivity* and building social-ecological *resilience*. The ASA focuses on building a shared fair, sustainable future and supports *biodiversity* retention of the *ecosystem services* related to *soils, water and land-use*. Learning Words workshops forefront *indigenous and local knowledge*, and ASA facilitation methods enable fair inclusion of *women and youth*. It is vital to understand that sustainable rangeland restoration and management involves respectful engagement. Above all, to recognise that engagement processes take time, and that respect and trust building are the foundational levels of transformation.
